

* Once uncommon, foreign products are now everywhere from toothpicks to electric cars

* Nowadays, it is not easy to even tell where a product was really made

* Take, for instance, the most iconic US product, the iPhone:

• Designed in California

• Assembled in China

• From parts produced in Korea, Germany, Japan, and the US

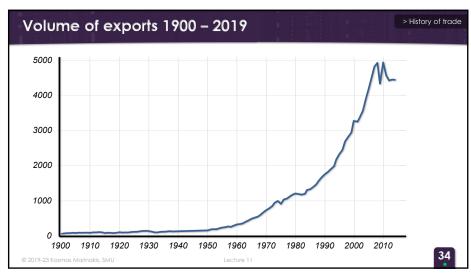

• By natural resources extracted in Russia, South Africa etc.

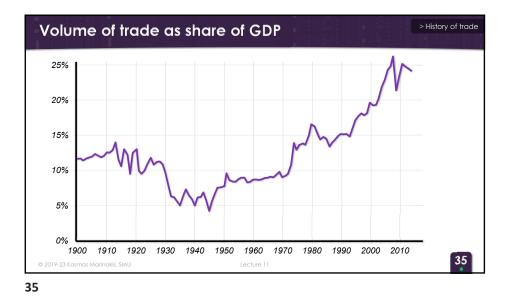

* Services follow a similar pattern of outsourcing:

• Customer support

• Services that can be communicated electronically.

* It became possible to have global trade after having in place several basic technologies
railroad – steamship – telegraph

* The beginnings of the global economy was in fact more than a century ago people in England were able to buy Chinese tea in the 1910s

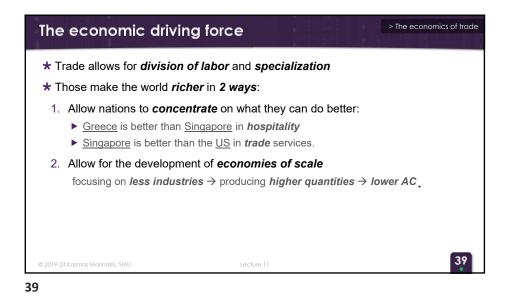

* Between the two World Wars international commerce was reduced as a share of the GDP:

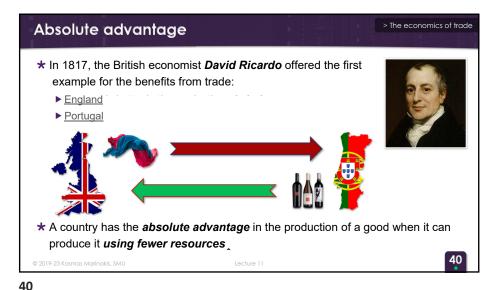

Not so much because of the war

Because of restrictions such as tariffs and quotas.

* By 1960 trade as a share of GDP was below the level of 1910.

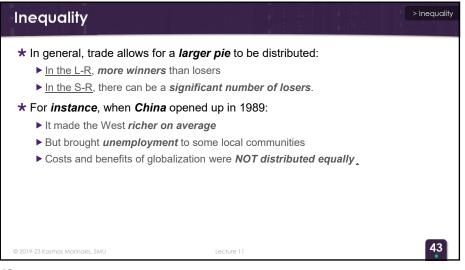

Comparative advantage () > The economics of trade * What if a country is **better** in the production of **both** goods?: ▶ Singapore can produce either 100 units of banking OR 50 units of tourism per year ▶ Cyprus can produce either 50 units of banking OR 40 units of tourism per year. * 1 unit of tourism costs: ★ 1 unit of banking costs: ▶ 2 units of **banking** to Singapore ▶ 0.5 units of *tourism* to Singapore ✓ ▶ 1.25 units of **banking** to Cyprus. ✓ ▶ 0.8 units of *tourism* to Cyprus. * Singapore should focus on banking, Cyprus on tourism, and trade * Singapore has the *comparative advantage* in *banking* and Cyprus in *tourism* a country has the *comparative advantage* in what it can produce at a *lower* opportunity cost 41 Lecture 11

The Lakner-Milanovic curve (1988 – 2008) > Inequality 80% Global 70% elite 60% Middle class of developing 50% countries 40% 30% Middle class of developed 20% Super countries 10% poor 0% 5% 10% 15% 20% 25% 30% 35% 40% 45% 50% 55% 60% 65% 70% 75% 80% 85% 90% 95% 95-99% 100% Percentile of global income distribution 44 © 2019-23 Kosmas Marinakis, SMU

* Globalization undoubtably has contributed to inequality
BUT technology also brings inequality (yet nobody demands to roll it back)

* Reversing globalization will bring an all-new social shock:

| Tariffs on goods may have unpredictable reverse effects
| Communities have adapted (factories closed, technologies evolved, people left).

* We could have mitigated the adverse effects with policies:
public goods, social safety nets, reskilling

* But its always easier to put the blame on those on the other side of the border especially when these people are of slightly different color, religion or culture.

WARNING!

The slides in this handout are created with the intention to serve a visual aid for the audience during the live presentation of the material in the lecture. As such, they are not designed to be standalone reading material and should be used strictly as reference, side by side with notes taken in the lecture. Studying solely from the slides is not recommended and might in some cases mislead those who have not attended the relevant lecture. Less than 20% of tasks in test and exam can be answered solely from the slides
